The World's First
Jewelry Operating System

One Unified Platform. Deploy Your Way : **SaaS, Cloud, or On-Premises.**

JOS®

POWERED BY

SIONIQ

Tailored Specifically for Jewelry Business

Manufacturers

SIONIQ enables jewelry manufacturers to manage sourcing, design, production planning, WIP tracking, inventory, quality control, and compliance within a single unified platform. Supporting both single-facility and multi-unit manufacturing environments, it delivers centralized visibility with unit-level execution-ensuring process consistency, cost accuracy, full traceability, and scalable production growth.

Wholesalers

Designed for high-volume and multi-location wholesale operations, SIONIQ streamlines order management, pricing, inventory optimization, customer management, and financial reconciliation. Whether operating from a single distribution hub or across regional and global networks, wholesalers benefit from centralized control, faster fulfilment cycles, improved margin visibility, and real-time operational intelligence.

Retailers

SIONIQ unifies POS, inventory, CRM, marketing, ecommerce,and finance into one intelligent retail platform. It enables jewelry retailers to manage single stores as well as multi-store and chain operations with centralized governance and store-level flexibility—delivering consistent brand experiences, seamless omnichannel selling, and real-time performance insights across all outlets.

Bullion Traders

Built to meet the precision, compliance, and risk -management requirements of bullion trading, SIONIQ provides real-time pricing, inventory control, regulatory reporting, risk monitoring, and secure financial management. Supporting both standalone trading desks and multi-branch bullion operations, it ensures transparency, speed , and operational control in dynamic global markets.

Designed for the complexities of **Gold, Silver, Diamonds,** and **Precious Stones.**

Why JOS

01

Built Exclusively for Jewelry

Designed from the ground up to address the unique operational complexity, precision requirements, and compliance standards of the global jewelry industry, ensuring industry-aligned workflows and accurate business control.

One Unified Business Engine

02

Seamlessly integrates ERP, intelligence, commerce, and operational systems into a single, intelligent platform, eliminating silos and enabling consistent, organization-wide data flow.

03

Complete Value Chain Coverage

Supports end-to-end jewelry business processes—from sourcing and production to inventory management, retail operations, finance, CRM, ecommerce, and digital gold—within one integrated ecosystem.

Industry-Driven Intelligence

04

Delivers embedded, real-time analytics and insights tailored to jewelry operations, enabling accurate visibility, informed decision-making, and tighter operational control across all functions.

05

Flexible & Scalable Deployment

Deployable through SaaS, Cloud, or On-Premises allowing businesses to scale seamlessly from single-store or single-unit operations to multi-location, multi-country enterprise environments.

Trusted Across Business Models

06

Purpose-built to support manufacturers, wholesalers, retailers, bullion traders, and multi-unit or chain operations, accommodating diverse workflows, volumes, and operational complexities.

07

Future-Ready by Design

Built on modern, secure, and compliant technology architecture to ensure long-term performance, data security, regulatory adherence, and readiness for future digital transformation.

Mobile App Control for Business & Customers

08

Provides secure mobile applications that enable owners and management teams to monitor and control operations in real time, while offering customers a simple, unified, and engaging digital experience.
